PERFORMANCE, PRECISION, PASSION

In 1888, a Scotsman named John Boyd Dunlop invented the pneumatic tyre. Today, Dunlop is one of the world's leading manufacturers of high and ultra high performance motorcycle tyres with an impressive track record of racing success.

Racing has driven Dunlops success since the beginning and we have achieved exceptional results on the track. Our history and success is linked with the innovations developed from racing and we then transfer this technology to the product you use today on your road or off-road machine.

Dunlop offers a huge range of product to all cater for motorcyclists, no matter what you ride, how you ride, or where you ride.

Our engineers and designers across Europe, North America and Japan are committed to developing the best high-performance street and off road tyres manufactured in factories based in three continents. Sharing our expertise on global projects involving R & D, innovation, testing and racing, enables us to produce a product of the highest quality.

Our work is never complete. We are continually developing and testing new technologies and compounds in order to create the best motorcycle tyre for your needs. Today, Dunlop is the official single tyre supplier for the Moto2 and Moto3 Championships, AMA Championships, Australasian Superbike Championships.

Many of the world's most prestigious motorcycle manufacturers also fit Dunlop tyres as original equipment, including, Honda, Aprilia, Benelli, Buell, Derbi, Ducati, Harley Davidson, Husaberg, Husqvarna, Indian, Kawasaki, KTM, MV Agusta, Piaggio, Suzuki, Triumph, Victory and Yamaha.

RACING

Dunlop's racing success both in Australia & Internationally is unsurpassed.

ROAD

Dunlop has won 16 of the past 20 Australian Superbike Championships.

Dunlop has won 18 of the past 22 Australian Supersport Championships

OFF-ROAD

Dunlop has won 19 of the past 24 Australian Pro Open Motocross Championships.

RACE TO ROAD

Dunlop has been involved with racing for almost as long as the tyre has been invented. Our involvement between racing and road riding is more than just an idea. It is the philosophy behind everything we do.

Through our many years of racing involvement and success, Dunlops engineers have transferred the technological breakthroughs from the track to the road to ensure the tyres you ride on today are at the cutting edge of technology. Multi-Tread & N-Tec technology were both developed for the track. These race winning advances are now available in the tyres you use on the street today.

OUR TECHNOLOGY

N-TEC TECHNOLOGY was first created to meet the demands of Superbike racing. Due to a radical new carcass design Dunlop developed a race tyre that has dominated almost form of international open tyre rule road racing since its release.

N-Tec features are:

- / Continuously wound carcass virtually eliminates tyre growth at speed for excellent high speed stability
- / Cooler running temperatures maintain carcass integrity, prolong tread life and permits the use of higher-grip lateral traction compounds.
- / Softer feel in corner entry & improved cornering traction.
- / Larger contact patch provides a substantial increase in corner exit grip.
- / Remarkable consistency in lap times over the life of the tyre: fastest laps are commonly achieved in the last few laps of the race.

MULTI TREAD (MT) TECHNOLOGY is our latest innovation. Years of success in global Superbike & Endurance racing have resulted in the development of a pioneering multi compound, which is transferred to many of our Sportmax street & track products. The central traction compound contacts the road when the motorcycle is upright. It uses a tougher cooler running compound that maintains straight-line stability, traction, braking and most importantly longer tread life. The lateral compound that contacts the road when the motorcycle is leaning over incorporates a rubber compound specifically developed to enhance grip at maximum lean angles.

DUNLOP'S UNIQUE 5 ZONE TREAD COMPOUND on the rear tyre gives race tyre grip without compromise to tyre wear.

MT5 features are:

- / High Mileage compound in centre of tyre for class leading wear
- / Softer Compound on the side of the tyre for superior drive out of corners
- / Race compound on the shoulder of tyre for high edge grip similar to racing tyres

HI SILICA COMPOUND is blended with modern polymers to offer superior wet and dry grip in all weather conditions and fast warm-up in cold conditions

JOINTLESS BELT (JLB) CONSTRUCTION uses cord density engineering technologies to deliver more linear steering properties, improved rider feedback, and top class high-speed stability. Additional benefits include more subtle shock absorption for enhanced riding comfort on longer rides

JOINTLESS TREAD (JLT), also called strip-winding technology, allows multiple compounds to be precisely positioned on the tyre being striped on in a single tread wire, to achieve:

- / Minimised force variation within the tyre
- / Improved durability
- / Progressive grip from the tread centre to shoulder
- / Less heat build up
- / High-speed tyre stability

CARCASS THRUST TUNING TECHNOLOGY for less carcass distortion under power. Reduce tyre squirm for smooth line change and consistent rider feed back.

CARCASS TENSION CONTROL SYSTEM Many of our front and rear tyre constructions use a Carcass Tension Control System (CTCS) to control carcass stress distribution. This optimises the tension in different areas of the casing, improving cornering stability, straight-line traction and rider feedback so that you can ride with confidence.

- / Allows different areas of the tyre to be designed with different tension levels to distribute forces in a more progressive way.
- / Controls stress distribution to provide an optimised contact area at different lean angles.
- / Achieves better control without the use of additional components, thus reducing weight.
- / Improves suspension characteristics, reducing steering effort and improving rider feedback.

SPORTSMART²

Dunlop's new technologically advanced tyre for sport bikes takes sports tyres to a higher dimension delivering superior handling, optimised wet and dry grip, durability, comfort and high speed stability.

- / Grip is enhanced by using Multi-Tread technology on the rear tyre with a specific shoulder compound for better cornering in wet and dry conditions
- / Reverse direction centre tyre pattern on the front enhances water drainage for further improved wet performance
- / Improved handling achieved by the use of new front tyre shape and construction delivering faster turn-in, accurate line holding and braking stability in corners
- / High comfort due to use of JLB and JLT technologies, means fewer components, a new tyre shape and lighter tyres

SPORTMAX³

Meet the all-new Dunlop Sportmax Q3, the next-generation sport tyre featuring Dunlop's new Carbon Fibre Technology (CFT).

- / Dunlop's (CTF) Carbon Fibre Technology for:- exceptional performance, cornering and feel
- / MT Multi-Tread™ technology in the rear tyre uses a tough, long-wearing compound in the centre of the tread for excellent traction and longer tread life, plus special lateral grip compounds for outstanding grip
- / Intuitive Response Profile™ (IRP) technology in the rear tyre allows greater latitude in line choice while cornering, plus amazingly linear steering
- / New rubber compounds derived from road- racing tyres to deliver the maximum grip for today's Superbikes
- / Aggressive new Q3 tread pattern uses fewer grooves that are longer in length to enhance wet-weather performance
- / The Dunlop Sportmax Q3 offers superb grip, stability, steering feel and longevity on the street and on the track

SPORTMAX Q-13Z

DUNLOP'S new AL-13Z is a race bred tyre suitable for both spirited sports riding and also track day use. Featuring Dunlop's unique MT5 5 zone tread compound the AL-13Z offers race tyre grip levels without compromise to tyre wear.

- / Featuring Dunlop's MT5 5 zone tread compound with a high mileage centre compound, softer compound on the side & race compound on the shoulder for class leading grip & wear
- / A high silica compound to enhance both wet and dry grip levels
- / New race type profile allows for race tyre handling and easy direction change with minimal rider input
- / CCT (Camber Thrust Tuning Technology) reduces tyre squirm under hard acceleration and allows for smooth & rapid line change
- / Jointless Tread with Jointless Belt Carcass for consistency and zero growth at speed

ROADSMART III

CLASS LEADING
HIGH MILEAGE

Dunlop's new Sportmax RoadSmart 3 has been developed to offer class leading mileage combined with high grip levels in both wet and dry conditions. The Roadsmart III offers improved rider feedback, comfort and high speed stability.

- / Rear MT (Multi Tread) compound uses a newly developed abrasion resistant compound for class leading high mileage in the centre with an improved compound on the shoulder for superior wet and dry grip.
- / New compound offers higher grip levels at low temperatures and in wet conditions.
- / Both front and rear tyres use HES-JLB for improved impact absorption and stability.
- / Slim High Bead Apex for sidewall strength with improved flexibility for superior comfort and less fatigue on long rides.
- / New profile & construction for easy line change and less rider fatigue.
- / Fast warm up.
- / Linear wear and responsive handling throughout tread life.

ONE TOUGH TEST, ONE CLEAR WINNER

**A REVOLUTIONARY TYRE PUT
THROUGH ONE OF THE MOST
RIGOROUS TESTS ON EARTH.**

"Based on the functional testing, the cumulative point scores in the dry and wet testing show the Dunlop RoadSmart III was the overall winner of the functional test. In the wear test the Dunlop RoadSmart III clearly showed the highest potential mileage, combined with very safe and neutral cornering behaviour from the beginning to the end."

MOTORRAD TEST CENTRE

MotorradTestCenter

DUNLOP

THE REVOLUTIONARY NEW

ROADSMART III

*Tested by Motorrad Test Center, by order of Goodyear Dunlop. The Dunlop RS III was awarded overall test winner. The Dunlop RS III was compared to 4 tested competitor tyres in the sport touring radial segment (Michelin Pilot Road 4 GT, Bridgestone T30 Evo, Pirelli Angel GT and Metzeler Roadtec Z8 M/O) in dry and wet test and to 3 tested competitor tyres in the wear test (Michelin Pilot Road 4 GT, Bridgestone T30 Evo, Pirelli Angel GT). Dry and wet test carried out at Mireval Proving Ground, France in January 2016. Wear test carried out in Almeria Spain in November 2015. Bike used was Yamaha FJR 1300A with tyre sizes Front 120/70/ZR17 and Rear 180/55/ZR17.

SPORTS TOURING RADIAL

ROADSMART II

Dunlops new Sportmax RoadSmart II is a premium sport touring tyre that can be ridden on in confidence no matter what the weather conditions or road conditions and offers a class leading combination of grip, stability, comfort, handling & wear.

- / Front and Rear tyres use JLB construction to deliver increased stability.
- / Rear Multi-Tread (MT) construction incorporating a long wearing compound in the centre and a lateral grip compound on the side for class leading grip and performance.
- / Increased tread depth further promotes water channeling whilst also extending tyre life.
- / Intuitive Response Profile (IRP) allows for greater latitude whilst cornering and provides linear steering at all lean angles for enhanced grip & handling
- / New cosecant-curve tread pattern helps promote even tyre wear and stiffens pattern for reduced tyre squirm and extended tread life.
- / New rubber compounds incorporating Silica for superior wet grip and accelerated warm-up. The new compounds allow for maximum performance over a wide range of operating temperatures.
- / Fast warm up.
- / Linear and responsive handling throughout tread life.

STREETSMART

Ride in confidence on a premium bias construction tyre newly developed for Sport and Sport Touring bikes of all capacity.

- / Streetsmart uses new generation compound polymers with silica reinforcement, for improved grip in cold and wet conditions.
- / Front tyre features continuous centre grooves for wet grip and steering characteristics.
- / Front and rear tyres feature cosecant curve design for improved wear resistance.
- / Larger tread grooves improve water drainage to enhance wet grip.
- / Rear tyres uses increased tread depth for extended mileage.

Since 1984 Dunlop tyres have been Original Equipment on Harley Davidson motorcycles. The Dunlop technical team work closely with the Harley Davidson engineers to design tyres to meet the highest standards expected from the Harley Davidson factory.

HARLEY DAVIDSON OE

D401

The D401 is the approved Harley-Davidson cruiser tyre.

- / An advanced tread pattern and specifically formulated compound deliver outstanding grip in wet and dry weather and provides long tyre life.
- / D401 tyres use bias or bias belted construction and incorporate a computer optimised tread profile to reduce cupping for even wear.
- / Now available in White Wall in selected sizes.

HARLEY DAVIDSON OE

D402

The D402 is the approved Harley-Davidson touring tyre.

- / Built with a three-ply polyester casing with two fibreglass belts, the D402 offers greater load-carrying capacity and stability.
- / Computer - optimised tread profile with offset centre groove improves rider confidence over rain grooves and steel-grated bridges, while reducing cupping for even wear.
- / The D402 is available in front and rear black wall, slim white line and wide white wall, all with H speed rating.

AMERICAN ELITE (REAR ALL MT)

MULTI-TREAD FOR HIGH MILEAGE

Dunlop's American Elite is the only aftermarket tyre line for Harley-Davidson motorcycles that is designed, tested and manufactured in the U.S.A.

/ The American Elite delivers enhanced tyre mileage thanks to an MT Multi-Tread rear tyre compound that incorporates a long-wearing compound in the centre of the tyre, along with a lateral-grip compound on each shoulder for great handling. Now available in a variety of sizes & sidewall styles, inc. black, narrow white-sidewall & wide white-sidewall.

ELITE 4 RADIAL

ELITE 4 BIAS

MULTI-TREAD FOR HIGH MILEAGE

Mileage, mileage and more mileage: Dunlop's all-new Elite 4 with MT Multi-Tread rear tyres provide significantly more mileage than single-compound tyres.

/ All Elite 4 rear tyres utilize Dunlop's MT Multi-Tread technology with a long-wearing compound in the center of the tyre and a lateral-grip compound on each shoulder, providing increased mileage without sacrificing handling. New tread pattern helps provide class-leading wet-pavement performance, even wear over the life of the tyre, and less road noise. Available in radial and bias-ply construction, the Elite 4 fits hundreds of touring, cruiser and standard bikes, including current and non-current machines.

ELITE 3 RADIAL

These radial touring tyres deliver many miles of enjoyment for most big radial-shod touring motorcycles.

- / High wear resistance with even-wear characteristics and great traction.
- / The Elite 3 tread pattern helps provide class-leading wet-pavement performance.
- / The Elite 3 sport-derived profile helps provide a lively response in turn transitions and a solid feel through turns for confident cornering.

The extra-wide Elite 3 rear tyres incorporate all the high-tech features of the regular radial E3 lineup to produce the same benefits – it's the tyre for show and go.

- / Includes extra-wide custom sizes of 240/40R18 and 250/40R18, with good looks plus enhanced handling and performance for custom motorcycles.
- / Custom-wide Elite 3 tyres are original equipment on several Harley-Davidson models and the Victory Hammer.
- / To complement the rear tyre, custom-style 21-inch front tyres are also available in 120/70R21 and 90/90-21 sizes for custom applications.

K81 / TT100GP (60S-70S)

Dunlop offers a wide range of specialist tyres to suit that 40's to 70's restoration project.

- / The K70 was fitted OE on many British bikes manufactured in the 60's.
- / The legendary K81/TT100 was fitted OE on many machines through the 70's.
- / This tyre was also the popular choice as a replacement tyre for many bikes of that era.
- / The TT100 is also available in a modern GP race compound version for those special restorations that may be used at track days or time trials.

TRAILSMART

The adventure tyre that takes you wherever the road takes you. TrailSmart is Dunlop's next generation trail tyre for medium to large displacement adventure bikes. TrailSmart takes inspiration from the market-leading Trailmax TR91, maintaining a similar groove pattern that provides superior grip in all conditions, dynamic handling combined with a high level of feedback and precise steering. What's more, TrailSmart offers considerably higher mileage, achieved by increasing the land to sea ratio, reducing the groove width and length while at the same time redistributing the tread blocks.

/ Offering optimum on-road performance, TrailSmart allows the more adventurous rider to push on where paved roads end and gravel trails begin.

MX-3S

Descended directly from 2013 MX World Championship race-winning tyres, the MX-3S/3SF are the latest generation choice for soft to medium-terrain. Developed alongside the Honda and Kawasaki 2013 World Championship MX campaigns, with former MX GP rider and Supermoto Champion Eddy Seel.

- / Excellent damping and line holding thanks to anti-rebound rubber (MX-3S rear)
- / Directional tread pattern offers optimised braking performance (MX-3S front)
- / New 'tie-bar' less design gives better contact feel and traction in muddy conditions
- / High traction and great starts provided by larger centre blocks (MX-3S front)
- / Tighter control in corners thanks to Progressive Cornering Block Technology (PCBT)
- / More consistent and controlled line-holding achieved through CTCS carcass technology

INTERMEDIATE-HARD

MX51/MX52

MX52

MX52 Intermediate - Hard Terrain

- / The new medium-hard terrain tyre developed and perfected in the world's most competitive motocross environment.
- / Optimised braking performance and cornering stability thanks to Directional Pattern block design (MX-52 front).
- / Directional precision and line holding stability from Carcass Tension Control System (CTCS).
- / Better rear control under power, enhanced traction and improved straight line stability from staggered centre blocks.
- / Improved slide control and cornering grip due to Progressive Cornering Block Technology.
- / Centre blocks deliver great traction and improved wear on hard ground (MX-52 rear).
- / Anti-rebound rubber reduces kick back, great for harder terrain (MX-52 rear).
- / New side blocks improve cornering and maximise drive on hard terrain (MX-52 rear).

MX71/MX71A

MX71

MX71 Hard Terrain

- / The all new medium-hard terrain Geomax MX71 brings cutting-edge technology to the dirt. Its tread patterns are directional both front and rear, optimising performance under braking and acceleration.
- / The rear tyre's special wound block design and the unique block distribution of the front tyre give extra bite out of turns and boost the agility and controllability of your bike, especially on medium- to hardpack terrain.
- / Our comparison tests have shown the MX71 to be a leader in the vital areas of traction, handling, braking and bump absorption, without compromising corner grip, stability or durability

OFF-ROAD / ENDURO

GEOMAX OFF ROAD/ENDURO COMPETITION

AT81 / AT81RC (REINFORCED)

AT81

Unlike motocross, where track conditions remain fairly consistent - allowing riders to choose hard, intermediate or soft -terrain tyres to suit conditions- off road riders and racers can encounter wildly varying terrain over the course of a race or out for a weekend ride.

- / It is not unusual to encounter all types of conditions, from hard packed fire roads, sand, water crossings mud and loam all in a days ride and that is where the AT 81 offers an exceptional overall choice.
- / Its newly formulated high - wear resistant rear compound offers enhanced resistance to chipping, tearing and wear.
- / The AT81 rear tread block shape and pattern plus the DIRTuitive Grip Design (DGD) knobs help the tyre penetrate down through the surface for extra traction across a broad range of off-road conditions.
- / Reinforced also suitable for desert racing.

HOW TO READ A MOTORCYCLE TYRE SIDEWALL

SAFETY WARNING!

The above are size-marking conversion charts and do not imply interchangeability. Consult motorcycle manufacturer and Dunlop for correct replacements for original equipment tyres. Critical clearances, motorcycle compatibility and stability, load-bearing capacity, speed rating, radial versus non-radial, pattern and tread compound requirements, inflation recommendations and front-to-rear tyre matching will all vary with tyre selection. Wrong selection can result in tyre failure or loss of control with serious injury or death.

NOTE: For tyres having a maximum speed capability above 240 kph, a Z must appear in the size designation. Consult tyre manufacturer for maximum speed when there is no service description.

S, H, V and Z ratings where applied are indicative of high-performance capability based on Dunlop indoor wheel testing and are not valid for damaged, altered, repaired, excessively worn, underinflated or overloaded tyres. Dunlop does not recommend the use of any of its products in excess of legal speed limits. Consult the owner's manual for recommended speed rating.

TECHNICAL INFORMATION

DUNLOP MOTORCYCLE OFF-ROAD TYRE INFLATION PRESSURE GUIDE

TYRE USE	FRONT PSI	REAR PSI
Motocross Hard Terrain	10 – 12	10 – 12
Motocross Intermediate Terrain	12 – 14	12 – 14
Motocross Soft Terrain	10 – 11	10 – 11
Desert/Enduro	14 – 18	14 – 18
Dual-Sport	18 – 22	16 – 26

SAFETY NOTE! These tyre pressures are given as guidelines only. Actual operating pressures must be adjusted to suit specific riding conditions, surfaces, speeds and loads. Intermediate and hard-track applications will require lower pressures than soft-track applications. **The 22 psi front and 22 psi rear are minimum pressures for dualsport highway use. Pressures for dual-sport use must be increased to pressures specified by the motorcycle manufacturer for highway use.**

DUNLOP MOTORCYCLE OFF-ROAD TYRE SIZE APPLICATION CHART

ENGINE CC	FRONT	REAR	ENGINE CC	FRONT	REAR
50	2.50-10	2.75-10	100-125 (2-stroke) / 250 (4-stroke)	80/100-21	100/100-18 or 110/90-18
60	60/100-14	80/100-12		90/100-21	100/90-19 or 110/80-19
80	70/100-17	90/100-14	250 (2-stroke) / 450 (4-stroke)	80/100-21	110/100-18 or 120/90-18
80-100	70/100-19	90/100-16		90/100-21	110/90-19 or 120/80-19
			500	80/100-21	120/100-18 or 120/90-19
				90/100-21	

Also see page 45 for additional Off-Road Motorcycle Tyre Safety Information and pages 41-46 for general motorcycle tyre service and safety guidelines.

SAFETY WARNING!

The above are size-marking conversion charts and do not imply interchangeability. Consult motorcycle manufacturer and Dunlop for correct replacements for original-equipment tyres. Critical clearances, motorcycle compatibility and stability, load-bearing capacity, speed rating, radial versus non-radial, pattern and tread compound requirements, inflation recommendations and front-to-rear tyre matching will all vary with tyre selection. Wrong selection can result in tyre failure or loss of control with serious injury or death.

IMPORTANT SAFETY INFORMATION: FAILURE TO HEED MAY RESULT IN ACCIDENT, INJURY OR DEATH. DEALERS CONVEY THE FOLLOWING TO CUSTOMERS AND TYRE FITTERS:

- Follow Tyre Mounting Safety Precautions on page 45.
- Checking of tyre pressures is the most important tyre-maintenance function you and your customer may perform. NOTE: For high-speed, fully loaded or dual-riding touring motorcycle applications, inflate front tyres to maximum recommended by vehicle manufacturer for Dunlop fitment, and rear tyres to maximum load inflation pressure on sidewall. Never exceed maximum load indicated on tyre sidewall or vehicle capacity load found in owner's manual.
- Replacements for worn, differently patterned or constructed tyres will not react the same. When new tyres are fitted, they should not be subjected to maximum power, abrupt lean-over or hard cornering until a reasonable run-in distance of approximately 150 kilometres has been covered. This will permit the rider to become accustomed to the feel of the new tyres or tyre combination, find the edge and achieve optimum road grip for a range of speed, acceleration and handling uses. Advise your customer to check and adjust to recommended inflation pressure after tyres cool for at least three (3) hours following run-in. Remember: New tyres will have a very different contact patch and lean-over edge. New tyres, new with older and different pattern combinations require careful ride evaluation.
- The letters S, H, V and Z included in the size markings of some of our street tyres are speed ratings recognized by the European Tyre and Rim Organization and Japanese Industry Standards. The ratings are assigned based upon controlled indoor wheel testing. Dunlop does not recommend the use of any of its products in excess of legal speed limits.
- For purposes of assessing clearance, inflated section width is not the tread width. Section width is the width of the tyre measured from sidewall to sidewall at the widest point in the case of most tyres. The exceptions are some of the knobby tyres for which the knobs on the sidewall protrude farther than the section width.
- Metric-size sport tyres do not have the same load capacity as alpha-numeric (such as MT90H16) touring tyres and should not be used for the same service.
- See complete service instructions and other important safety information on pages 41-46.

TECHNICAL INFORMATION

DUNLOP SAFETY ADVISORY

Failure to heed may result in accident, injury or death.

The following guidelines are offered both to assist in choosing the Dunlop tires that will most closely match the motorcycling needs of your customers, and to provide the service and maintenance advice necessary for customer safety and satisfaction. Convey this important safety and service information to your tire fitters and customers.

TIRE SELECTION, SAFETY, CARE AND MAINTENANCE

■ TIRE SELECTION

When selecting new Dunlop motorcycle tires, be sure they meet the requirements of your customer's motorcycle and its expected usage.

For the makes and models not covered by the Dunlop Motorcycle Tire Application Guide, contact Dunlop before tires are fitted.

Fitment of radial tires to the wrong vehicle can cause instability and accidents.

Some motorcycles may be fitted only with radials. Consult motorcycle manufacturer before fitting radial replacements to ensure you are applying the correct specification and combination for your customer's motorcycle.

Some motorcycles may be fitted only with radials that match original equipment. Comply with the motorcycle owner's manual recommendations.

■ FRONT AND REAR TIRE MATCHING

Remember, the correct matching of front and rear tires is important to obtain optimum performance and handling. Follow the Tire Selection guidelines.

Mount only tires marked "front wheel" on the front position and only tires marked "rear wheel" on the rear position.

A new front tire with a worn rear tire can cause instability.

Mixing radials, or mixing radials with bias or belted-bias tires, may adversely affect handling and stability, and should only be done when specifically fitted and/or recommended by an OE vehicle manufacturer. It should be noted that many factors other than tire incompatibility can affect the handling of a motorcycle, including the weight and height of the rider, mixing worn with unworn tires and the fitment of luggage or fairings. Consult the motorcycle manufacturer before making modifications from stock.

■ LOAD-CARRYING CAPABILITIES

Tires offering different load-carrying capacities are available. Consider carefully the weight of the motorcycle, whether it will carry passengers and the weight of any optional equipment. Remember, the load-carrying capability of the tires is also reduced by underinflation. It is possible to overload a tire even though it is the size specified by the motorcycle manufacturer. Maximum loads and the corresponding pressures are indicated on the sidewall of all Dunlop street tires.

Before riding, the motorcyclist must determine the total weight of luggage, equipment and rider(s) to be added to the motorcycle. Instruct your customers that the total weight of luggage, equipment and rider(s) must never exceed the vehicle load capacity found in the motorcycle owner's manual, or the maximum load molded on the tire sidewall.

Instruct your customers not to pull a trailer behind their motorcycle. Trailers may contribute to motorcycle instability, grossly exaggerated tire stresses and overload. Such stresses and overload can cause irreversible damage resulting in sudden tire failure, accident, injury or death. Dunlop does not warrant tires used on motorcycles fitted with trailers.

Sidecars should not be fitted unless approved by the motorcycle manufacturer.

■ MAINTAINING CLEARANCE

Consult the motorcycle manufacturer if you intend to mount sizes other than indicated in the owner's manual. Remember the tire's physical dimensions are important.

Adequate clearance of fenders, swingarm and so on must be maintained. Increasing tire size may require an increase in rim width. When increasing tire size and/or rim width, rotate wheel and inspect closely for sufficient clearance.

■ RIM SIZE

Consult the Dunlop Technical Data Chart or Dunlop to ensure that the tires selected are correct for the rims.

Correct rim width may be crucial to handling and stability. A tire that is installed on a rim wider than recommended will have a flattened profile, and a rider may easily reach the edge of the tread during cornering. A narrow rim will alter the tire profile, concentrating tire wear in a very small area during cornering, with a smaller contact patch during braking. Remember: Tire clearances are important.

Fitment to Harley-Davidson 18-inch and 19-inch CM contour rims may result in slippage or air loss. Harley-Davidson 18-inch and 19-inch CM contour rims are not compatible with Dunlop tires. Consult Dunlop if in doubt and before fitting tires to pre-1980 Harley-Davidson motorcycles.

■ TUBES

Tubes are a crucial part of the tube-type wheel assembly.

When fitting a new tire on a rim requiring a tube, a new tube should be fitted at the same time. Old tubes become stretched and if an old tube is fitted within a new tire, it can crease and fail due to thinning of the tube rubber. Tubes should be repaired only by an expert. Secure tube valve assembly to rim with care. Inspect rim band and consult motorcycle dealer for correct rim band replacement.

Always check the size markings on the tube to ensure that the tire size appears on the tube. Do not fit tubes in radial motorcycle tires, nor fit radials on rims requiring tubes, unless the tubes bear matching size and radial (R) markings.

■ TIRE INSTALLATION (SEE ALSO TIRE MOUNTING)

Dunlop street tires have balance dots in the bead or sidewall area to indicate the lightest point of the tire. All Dunlop street tires should be installed with these balance dots at the valve. All Dunlop street tires also have arrows on the sidewall, which indicate the correct direction of rotation.

Positioning of balance marks and inclusion of directional arrows are not universal among motorcycle tire manufacturers.

■ TIRE PRESSURES (SEE ALSO TIRE MOUNTING)

Follow pressure recommendations shown on the Dunlop Motorcycle Tire Application Guide. Contact Dunlop if year and model are not shown on the current guide and the owner's manual does not list pressure settings for Dunlop tires.

Keep in mind that hard cornering, passengers, heavy loads and sustained high speeds will require higher pressures (up to that indicated on the sidewall).

TECHNICAL INFORMATION

CHECKING TIRE PRESSURE IS THE MOST IMPORTANT TIRE MAINTENANCE FUNCTION YOU AND YOUR CUSTOMER CAN PERFORM.

For high-speed, fully loaded or dual-riding touring-motorcycle applications, inflate tires to maximum recommended by vehicle manufacturer for Dunlop fitment. Never exceed maximum load indicated on tire sidewall or vehicle capacity load found in owner's manual, whichever is lower.

Underinflated tires can result in imprecise cornering, higher running temperatures, irregular tread wear, fatigue cracking, overstressing and eventual failure of the tire carcass, or loss of control, which could cause accident, injury or death.

Overinflating tires does not increase load-carrying capacity, but will result in a hard ride and accelerated tire wear in the center of the contact patch.

Dunlop recommends using a gauge that holds the pressure reading.

Advise your customers to check cold tire pressure frequently with a good-quality gauge that holds a reading, and always before extended trips.

Loss of pressure may occur due to worn-out or badly seated valve cores. Check valve cores, and if necessary, tighten for correct seating, or remove and replace them. A metal or hard-plastic valve cap with an inner gasket should be used and installed finger-tight to protect the valve core from dust and moisture and to help maintain a positive air seal.

Loss of pressure may also be caused by tube damage, as well as cracked rubber tube or tubeless valve stem bases. Inspect rim bands, tubes and valves. Replace if damage or cracking is noted.

Repeated loss of inflation pressure may result from undetected tire damage. Visually inspect tires for punctures, cuts, abrasions, cracks, bulges, blisters or knots. It will be necessary to dismount the tire to complete an inspection for internal damage and any need for repair. See the Tire Repair section. Only certain punctures in the tread area may be repaired, and only if no other damage is present.

The appearance of stress cracks in the tread grooves is one indicator of overload and/or underinflation. If you find evidence of tread-groove cracking, you should remove and replace the tire immediately. This damage is permanent and non-repairable.

Tires with non-repairable damage must not be used again (see Tire Repair). Damage caused by impacts, penetrations or continued underinflated/overloaded use is progressive and can result in sudden and complete tire failure and accident, injury or death.

Your customers should always seek expert inspection of the dismounted tire following curb, chuckhole or other impacts, evidence of penetration beyond the tire surface, bulges or low pressure. They should not continue riding on such tires.

Advise your customers to inspect their tires frequently for damage and to always heed warning signs such as vibration, handling instability, rubbing or tire noise that occurs during operation of the motorcycle.

■ MINIMUM TREAD DEPTH

Always remove tires from service before they reach the tread-wear indicator bars (1.6mm of tread pattern depth remaining). Worn/unworn tyre combinations and worn tires used in wet conditions can result in deteriorated handling.

■ SPEED RATINGS

S, H, V and Z ratings where applied are indicative of high-performance capability based on Dunlop indoor wheel testing and are not valid for damaged, altered, repaired, excessively worn, underinflated or overloaded tires. Dunlop does not recommend the use of any of its products in excess of legal speed limits. Consult the owner's manual for recommended speed rating.

■ DYNAMOMETER TESTING

Never subject a tire on the motorcycle to dynamometer engine testing. This severe use of the tire may result in tread compound degradation and subsequent failure.

■ RUN-IN PERIOD

Replacements for worn, differently patterned or constructed tires will not react the same. When new tires are fitted, they should not be subjected to maximum power, abrupt lean-over or hard cornering until a reasonable run-in distance of approximately 150 kms has been covered. This will permit the rider to become accustomed to the feel of the new tires or tire combination, find the edge and achieve optimum road grip for a range of speeds, acceleration and handling uses. Advise your customer to check and adjust inflation pressure to recommended levels after tires cool for at least three (3) hours following run-in. Remember, new tires will have a very different contact patch and lean-over edge. New tires, mixing a new tire with a worn tire and mixing different pattern combinations may adversely affect ride and handling and will require careful ride evaluation.

■ TIRE REPAIR

Some punctures in motorcycle tires may be repaired.

Dunlop recommends only permanent plug-patch repairs of small (maximum 3mm diameter) tread-area punctures from within the dismounted tire by a qualified tire repair shop or motorcycle dealer. Never perform an exterior repair and never use an inner tube as a substitute for a proper repair. Speed should not exceed 80 kph for the first 24 hours after repair, and the repaired tire should never be used over 120 kph. Advise your customer to check inflation pressure after tire cools for at least three (3) hours following run-in, or sooner if air loss is suspected. See the Dunlop Service Advisory for additional motorcycle tubeless-tire repair information. Follow the same repair procedures for tires on rims requiring tube replacement. The repairer is solely responsible for the repair and any instructions to the repaired-tire user.

Advise your customers that no form of temporary repair should be attempted because secondary damage caused by a penetrating object may not be detected and tire or tube deflation may occur at a later date.

Dunlop does not recommend the use of liquid sealants. These are a form of temporary repair, and they may adversely affect ply material and mask secondary damage caused by a penetrating object. Advise your customers that reliance upon sealants can result in sudden tire failure and accident.

■ RETREADING AND OTHER MODIFICATIONS

Never use a Dunlop motorcycle tire that has been retreaded (recapped). Such tires are remanufactured products for which Dunlop's new tire testing and certifications are voided. Dunlop motorcycle tires are not designed for retreadability (recappability), nor will Dunlop be responsible for any retread process or performance.

Never use a Dunlop motorcycle tire that has been modified by the removal or addition of any material by tread grooving, siping, grinding or contouring, nor with any inlays or raised features (e.g., lettering) of any kind. Such tires are remanufactured products for which Dunlop's new tire testing and certifications are voided.

■ MOTORCYCLE MAINTENANCE

Dunlop strongly recommends regular inspection of the motorcycle generally, and of wheels in particular, because tire mileage and performance are adversely affected by a poorly maintained vehicle. Advise your customers to bring their motorcycles to the motorcycle dealer for regular maintenance checks, inclusive of tire inspections.

Advise your customers to maintain suspension settings in strict compliance with vehicle owner's manual. Improperly maintained components and incorrect or unbalanced front fork pressures will affect stability. Low suspension pressure will generate excessive tire stresses.

TECHNICAL INFORMATION

WHEEL BALANCE

It is essential that tire/wheel assemblies be balanced before use and rebalanced each time the tire is removed or replaced. Unbalanced tire/wheel assemblies can vibrate at certain speeds, and tire wear will be greatly accelerated.

All Dunlop street tires should be installed with the balance dot at the valve. Wheels may be balanced with spoke nipple weights, lead wire or self-adhesive rim weights. Consult the motorcycle manufacturer for approved wheel weights.

Dunlop does not recommend the use of dry or liquid balancers/sealers and will not warrant tires into which these materials have been injected. Tire and wheel assembly balance must be checked with a balance stand or computer wheel balancer.

WHEEL ALIGNMENT

Be sure to align the wheels each time the rear wheel is removed or the chain or belt is adjusted. Each revolution of an incorrectly aligned wheel can scuff off tread rubber, reduce tire mileage and impair steering and cornering.

SPOKES

Replace immediately any broken spokes and tighten any loose ones. Broken spokes transfer additional tension to adjoining spokes, creating the potential for further spoke failures. After tightening or replacing spokes, be sure that the wheel rims run true.

Inspect the rim, rim band and tube, and replace any of these components if they are damaged before refitting the tire.

Both broken and loose spokes may cause wheel wobble, thus accelerating tire wear, and could cause instability.

WHEEL INSPECTION

Bent wheel rims and bent or cracked cast wheels should be replaced immediately.

Bent rims may cause wheel wobble, bead unseating and, in the case of tubeless tires, gradual air loss. Sudden wheel failure may result from the use of cracked cast wheels. Advise your customers of these conditions and their consequences.

TUBE-TYPE RIMS

Note: Not all cast wheels, whether aluminum or magnesium, are suitable for tubeless-tire fitment.

Mount tires as tubeless only when the wheel manufacturer recommends it. Some spokeless rims require tubes. With a tube inserted, a tubeless tire may be fitted to a tube-type wheel.

Exception: Dunlop does not recommend fitment of non-radial tubes in radial tires. Ensure that tube markings match radial tire markings before fitting to rims requiring tubes.

SIDEWALL TREATMENT

Use a mild soap solution to clean sidewalls, white striping or lettering, and rinse off with plain water. Never apply any other material, cleaners or dressings to enhance sidewall appearance. These may degrade the rubber and remove inherent ozone cracking/weather checking resistance.

TIRE STORAGE PRECAUTIONS

Tires can be damaged as a result of poor storage conditions and such damage can affect tire performance and functioning and may eventually lead to tire failure.

Stored tires should be protected against environmental effects such as sunlight, ozone and other potentially damaging conditions.

Do store tires where the area is clean, dry, well ventilated and the ambient temperatures are temperate.

Do not store tires where the area is dirty or wet, or exposed to petroleum-based products or solvents.

Do not store tires where they are exposed to direct sunlight, extreme hot/cold temperatures or ozone-generating sources such as electric motors, battery chargers, generators or welding equipment.

OIL AND GASOLINE

Prolonged contact with oil or gasoline causes contamination of the rubber compound, making the tire unsuitable for use. Wipe off any oil or gasoline immediately with a clean rag.

Do not use any tire that has been exposed to oil, gasoline, corrosives or non-rubber-compatible liquids.

TIRE MOUNTING

Danger: Only specially trained persons should mount tires. Improper mounting can cause tire explosion and serious injury.

FOLLOW THESE MOUNTING PRECAUTIONS:

- Wear approved eye protection.
- Clean and lubricate beads and rim.
- Centralize rim band and tube to prevent pinching if tube-type rim.
- Note directional arrows on sidewall where applicable.
- Lock assembly on mounting machine or place in safety cage before inflating to seat beads.
- Set air hose relief valve at 40 psi.
- Use extension gauge and hose with clip-on air chuck. Stand back with no part of your body within the perimeter of the assembled tire and rim.
- Inflate with core in valve stem.
- Never inflate above 40 psi to seat beads.*
- Spin wheel to check bead seating and alignment.

*If the beads do not seat by 40 psi, deflate and repeat above procedures. Never use a volatile substance or rubber donut to aid bead seating. If the tire is a tube-type, deflate and reinflate after seating to prevent tube wrinkles.

D402 PT bead-lock tires may be mounted only on matching Harley-Davidson FXRP, FLHTP or FLHP rims. Consult the owner's manual.

NEVER MOUNT PASSENGER-CAR TIRES ON MOTORCYCLE RIMS

DUAL-SPORT AND ON-/OFF-ROAD TIRES

Safety note: The minimum pressure for dual-sport highway use is 22 psi front and 22 psi rear. Pressures for dual-sport use must be increased to pressures specified by the motorcycle manufacturer for highway use.

SAFETY TIPS FOR THE OFF-ROAD MOTORCYCLIST

1. Air pressure: ✓ Always maintain the recommended tire pressure for the type of terrain on which the motorcycle is being ridden; check the owner's manual. Underinflated tires may cause wheel damage when ridden on rocky, rough terrain and allow the motorcycle to squirm or wander on smooth, hard terrain. Overinflation may damage the tires and cause an unnecessarily harsh ride. To accurately measure tire pressure, use a standard tire-pressure gauge.
2. Condition: ✓ Check for cuts and gouges that may cause air leakage. Also check the tires for missing knobs and excessively worn tread.
3. Wheels: ✓ To avoid loss of control or injury, make sure axle nuts are tight and secured. Grasp each tire at the front and rear and try to rock it on its axle to detect worn-out bearings or loose nuts. There should be no free play or slip as you rock the wheel. Inspect wheels for broken or loose spokes and for cracks on the hub or rim.

SERVICE ADVISORY

MOTORCYCLE TUBELESS-TYRE REPAIR INFORMATION

Dear Dunlop Dealer:

This responds to the numerous requests for motorcycle tubeless-tire repair information.

Dunlop recommends only permanent repairs performed from the inside of the tire, using a combination patch/plug method. Never attempt a repair from the outside or inject a sealant, or simply use an inner tube, a patch or a plug as a substitute for a proper repair.

Only a qualified tire repair shop or motorcycle tire dealer should perform repairs. Inspection of the tire and adequacy of repair becomes the responsibility of the person actually performing the repair and Dunlop does not warrant the results of a repair in any way. Combination patch/plug repair kits for use by the repair shop or dealer are commercially available with accompanying instructions.

Before any repair should be attempted, however, a tire must be removed from the wheel and thoroughly inspected. The following are minimum guidelines for the repairer:

Tires should not be repaired if any of the following conditions exist:

1. A tire has been previously injected with a sealant/balancer.
2. The puncture is larger than 3mm in diameter.
3. The puncture is not perpendicular to the carcass.
4. The puncture is in the tire sidewall.
5. Separation of plies, tread separation or separation of any other components.
6. Cut or broken ply cords.
7. Broken or damaged bead wires.
8. Cut or damaged chafers (bead area).
9. Deterioration of the carcass inside the tire due to being run flat or underinflated.
10. Cracks or other damage to the integrity of the inner liner.
11. Excessive wear—tire should have at least 1.6mm of tread depth, excluding tread-wear indicators.
12. Cracks in sidewall or tread.
13. Impact breaks, cuts, snags or gouges that penetrate the surface.

NOTE:

- A. *There should be no more than one repair in any quarter of the tire and no more than two repairs per tire.*
- B. *The wheel itself must be in good condition. Any cracked or bent wheel, however slightly, may allow the loss of air and cause subsequent deflation of the tire.*
- C. *Following repair, the valve assembly should be replaced and the tire/wheel rebalanced.*
- D. *Speed should not exceed 80 kph for the first 24 hours after tire repair, and the repaired tire should never be used at speeds over 120 kph.*

THE REPAIRER IS SOLELY RESPONSIBLE FOR INSTRUCTING THE MOTORCYCLIST AS TO THE RESTRICTIONS TO BE PLACED ON TIRE USE FOLLOWING REPAIR.

In summary, NO form of temporary repair should be attempted. Any doubt as to inspection or adequacy of repair should be resolved by discarding the tire.

Be sure to consult our *Motorcycle Tire Limited Warranty, Care and Maintenance* brochure for additional information regarding the use of Dunlop tires, and convey important safety information to your customers.

Regards,

The Dunlop Motorcycle Tyre Performance Team
